

ABSTRACT

The present disclosure provides a software installation method and apparatus for a cloud phone, relating to the field of cloud computing, and particularly to the field of cloud phones. The specific implementation solution is as follows: obtaining an address list of image files of software installation packages, where software identifiers and storage addresses are stored in association in the address list; in response to receiving a request for installing target software in a cloud phone, obtaining a target address by searching the address list according to the software identifier of the target software; downloading an image file of the target software from the target address, where the image file includes an application package and a resource package; and installing the target software based on the application package and the resource package. This implementation can improve the software installation speed of cloud phones and reduce network traffic costs.
