ABSTRACT

Embodiments of the disclosure relate to a method, apparatus, device and storage medium for configuring a message card. The method includes: obtaining configuration information for a digital assistant, the configuration information indicating at least one message card for the digital assistant and a data source corresponding to the at least one message card, the configuration information further indicating a mapping relationship between a first data field associated with the at least one message card and a second data field associated with the data source; and controlling the digital assistant to display a message card based on the configuration information. In this way, by configuring the mapping between the message card and the data source, embodiments of the present disclosure may improve the reusability of message cards.
