

TITLE:
DISPLAY APPARATUS

ABSTRACT

5

A display apparatus includes a first pad group, a first light-emitting element, a pixel driving structure, a first conductive layer and a second conductive layer. The first conductive layer is disposed between the first pad group and the pixel driving structure. The first conductive layer includes a first conductive pattern and a second conductive pattern. The
10 first conductive pattern is electrically connected to one of the plurality of first pads and the pixel driving structure. The second conductive pattern is electrically connected to another one of the plurality of first pads. The first conductive pattern and the second conductive pattern have a first light-transmitting gap. The first light-transmitting gap is located below the first light-emitting element. The second conductive layer is disposed between the first
15 conductive layer and the pixel driving structure. The second conductive layer includes a third conductive pattern shielding the first light-transmitting gap.
