

Preparation of at least one partial oxidation and/or ammoxidation product of propylene

5 Abstract

Process for preparing at least one partial oxidation and/or ammoxidation product of propylene, in which the propylene is produced from crude propane by dehydrogenation and is subjected
10 to a heterogeneously catalyzed gas-phase partial oxidation and/or partial gas-phase ammoxidation in the presence of unreacted propane as constituent of a gas mixture 2 containing < 1% by volume of 1-butene.
