(54) Title: IMPROVED FLIP TOP PLASTIC LID

Fig. 1

(57) Abstract: A closure (1) for a container is described where the container has an open end and a closed end, the closure being configured to engage the open end of the container, wherein the closure comprises: a collar (3) configured to engage the container; a lid (2) connected to the collar by at least one hinge; wherein to facilitate engagement the collar is configured to extend over and surround the open end of the container such that an inner surface (5) impinges on, or is immediately adjacent to, an outer surface of the open end of the container; characterised in that a plurality of beads (6, 7) extend outwardly from the inner surface (5) of the collar (3) to fixedly hold the collar in engagement with the container, wherein said beads are located substantially uniformly relative to each other and occupy less than 50% of the inner surface of the collar. A container is also described in which is provided with a docking (14) on an inner wall (5) of the collar suitable for releasably suspending a scoop (10).
