

ABSTRACT

The embodiment of the present disclosure discloses multimedia data processing method, apparatus, electronic device, and storage medium. The method comprises: displaying a first shooting page which includes a first icon; displaying identification information of one or more pieces of pre-buffered multimedia data according to an operation of a user on the first icon; acquiring a publishing instruction for target multimedia data of the one or more pieces of pre-buffered multimedia data according to the identification information; and in response to the publishing instruction, publishing the target multimedia data to a network. Due to the fact that the user usually enters the shooting page when wanting to share multimedia data through a terminal, therefore the user can see a draft browsing entrance more intuitively and publish a draft to the network by directly displaying the draft browsing entrance in the shooting page, and the probability of the draft being successfully published is increased. Therefore, the user is prevented from continuously creating new multimedia data when sharing the multimedia data, so that the user experience is improved.
