URINE ABSORBENT PAD

A urine absorbent pad having a pair of longitudinally opposite ends extending transversely in parallel to each other and a pair of transversely opposite side edges longitudinally extending in parallel to each other is adapted to be folded along a transverse center folding line extending across a full length of the absorbent pad at a desired level in upper and lower halves. A inner side of the absorbent pad is formed with adhesive zones 11 extending over desired extents of the respective side edges and one of the upper and lower halves divided by the transverse center folding line is formed with guide means for insertion of a wearer's penis extending through a thickness of the absorbent pad.

Refer to Fig. 1.
