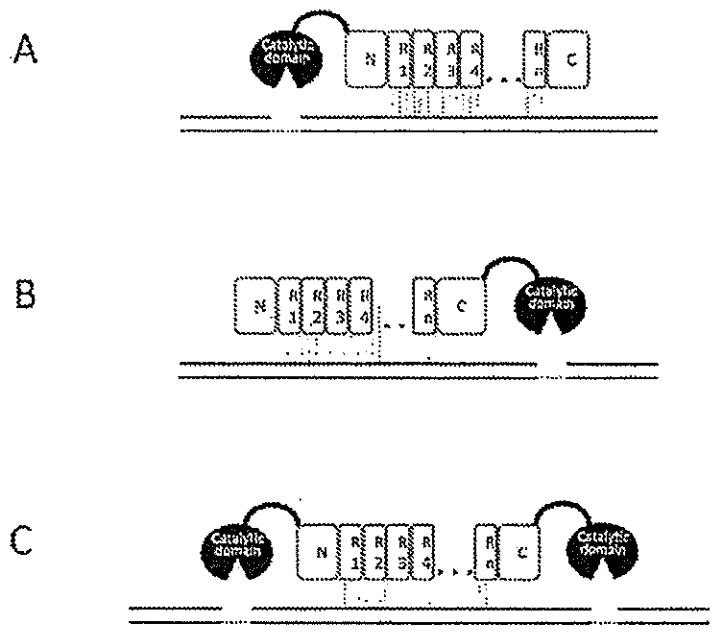

Figure 3

Legend

- Meganuclease (can be dimeric or monomeric)
- Catalytically inactive meganuclease; provides DNA binding specificity (can be dimeric or monomeric)
- Region contacting DNA
- Catalytic domain for DNA strand cleavage (can be cleavase or nickase domain)
- Protein linker region
- Double-strand DNA
- Single-strand of DNA optionally cleaved depending on the catalytic domain attached

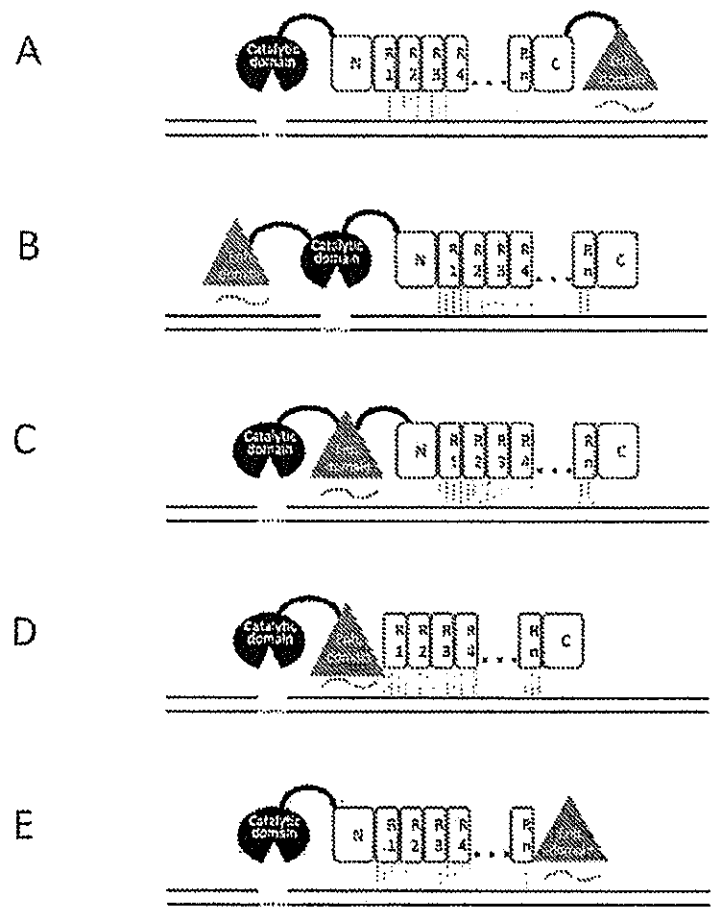

Figure 4

Legend

- N - TALE protein N-terminal region (including truncations thereof)
- C - TALE protein C-terminal region (including truncations thereof)
- R 1 - TALE protein repeat region (n = final repeat; depends on construct)
- * * * - Additional TALE repeat regions (for brevity, not shown)
- TALE repeat region contacting DNA
- Catalytic domain - Catalytic domain for DNA strand cleavage (can be cleavase or nickase domain)
- Protein linker region
- Double-strand DNA
- Single-strand of DNA optionally cleaved depending on the catalytic domain attached

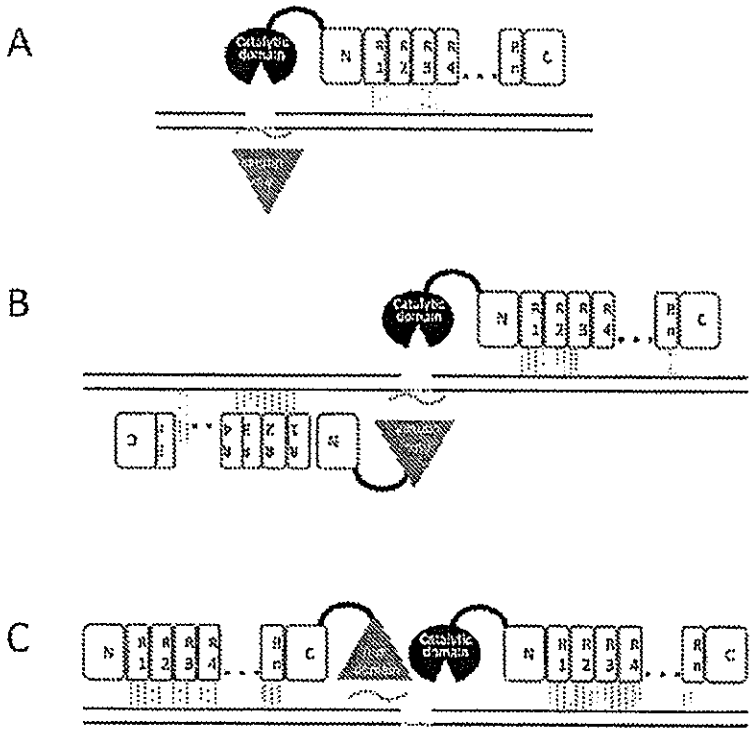

Figure 5

Legend

- TALE protein N-terminal region (including truncations thereof)
- TALE protein C-terminal region (including truncations thereof)
- TALE protein repeat region (n = final repeat; depends on construct)
- Additional TALE repeat regions (for brevity, not shown)
- TALE repeat region contacting DNA
- Enhancer domain; provides functional and/or structural support to scaffold
- Catalytic domain for DNA strand cleavage (can be cleavase or nickase domain)
- Protein linker region
- Double-strand DNA
- Single-strand of DNA optionally cleaved depending on the catalytic domain attached

Figure 6

Legend

- TALE protein N-terminal region (including truncations thereof)
- TALE protein C-terminal region (including truncations thereof)
- TALE protein repeat region (n = final repeat; depends on construct)
- Additional TALE repeat regions (for brevity, not shown)
- TALE repeat region contacting DNA
- Auxiliary domain; provides optional external functional and/or structural support to scaffold
- Catalytic domain for DNA strand cleavage (can be cleavase or nickase domain)
- Protein linker region
- Double-strand DNA
- Single-strand of DNA optionally cleaved depending on the catalytic domain attached
