

Abstract

APPARATUS FOR CHANNELLING COOKING FUMES

An apparatus for channelling cooking fumes arising from cooking taking place on a
5 stovetop in a designated area, the apparatus comprising a suction duct having at least
one inlet configured for intake of air containing the cooking fumes, the suction duct
configured to channel the air containing the cooking fumes away from the designated
area; and a supply duct having at least one outlet configured for outflow of air over at
least a portion of the stovetop such that the cooking fumes are at least partially directed
10 by the air towards the at least one inlet of the suction duct; the apparatus being hoodless.
