(54) Title: DEVICES AND METHODS FOR COORDINATED TRANSMISSION IN A WIRELESS NETWORK

Fig. 1

(57) Abstract: An access point, AP, (120) is disclosed configured to gain channel access by participating in a coordinated transmission making use of at least a portion of at least one transmission opportunity, TXOP, obtained and shared by a AP (110), operating as a Sharing AP (110), operating under a coordination agreement and/or within a Multi-AP, M-AP, set (125) of a wireless communication network (100) further including one or more further APs (130, 140) being part of the M-AP set (125) and/or operating under the same coordination agreement. The AP (120) is configured to implement one or more fairness timers, including a first fairness timer and/or a second fairness timer for ensuring a channel access fairness between the AP (120) and the other APs (110, 130, 140) operating under the same coordination agreement within the same M-AP set (125).
