

Automatic Vending Machine

Abstract

This invention is an automatic vending machine which comprises vending machine **body** (92), automatic vending machine **rotary product channel** (2), electronic control device, automatic vending machine **cooler** (1), of which, the automatic vending machine rotary product channel (2) and automatic vending machine cooler (1) are installed in the vending machine body (92), and the automatic vending machine rotary product channel (2) can rotate and it is equipped with several platforms; the electronic control device controls the rotation of the automatic vending machine rotary product channel (2); the automatic vending machine cooler (1) has **cooling device** (11). Also included are checking device of automatic vending machine rotary product channel **detection device**_(6), equipped with one or more auto **open/close outlet** (7), heat insulation board etc. And through a specific automatic vending machine mechanism, this invention enables the automatic vending machine to sell fresh flowers or similar product; especially it guarantees the temperature, humidity of the fresh flowers to allow it to survive.
