

ABSTRACT

The present disclosure relates to the field of wireless communication technology, and provided therein are a method for transmitting a system message, an apparatus, and a communication device. The method comprises: receiving an indication message by means of a light UE, the indication message being used for indicating monitoring behavior of the light UE; and determining a system message to monitor according to the indication message. Consequently, the light UE determines the system message to monitor on the basis of the received indication message, thereby facilitating an improvement of the monitoring efficiency of the light UE.
