METHOD OF MANUFACTURING A MULTILAYER CAPACITOR

ABSTRACT OF THE DISCLOSURE

According to a method of manufacturing a multilayer capacitor, the accuracy of the capacitance of the capacitor is improved. After internal electrodes 2 are printed on ceramic green sheets 1, the area of the internal electrodes on all of the ceramic green sheets is measured on a block-by-block basis. The number of the green sheets having main patterns provided thereon to be stacked to obtain a set capacitance for the capacitor is obtained from the area of the electrodes. A predetermined number of sheets are stacked to create a block. Thus, the accuracy of the capacitance of the multilayer capacitors is improved.
