

DESCRIPTIVE SUMMARY

Container (1) for the storage and transportation, e.g., in an airplane cargo bay (S) of a radome (R) displaying a flat base (B) on which the flat wall of said radome (R) rests and a detachable lid (C) that can be immobilized on the periphery of the base (B).

The base (B) consists of a plate of rectangular shape, two of whose diagonally opposite corners are truncated.

The cover (C) has a peripheral lower wall (4, 4') of vertical configuration whose outline conforms to the contour of the base (B) and an upper wall (6) curving inward near the top of the radome (R), the peripheral lower (4,4') and upper (6) walls being connected on each face corresponding to a side of the rectangle by at least one sloping side (5, 5', 5'') curving inward in the immediate proximity of the radome (R).
