[Document Name] Abstract

IMAGE INFORMATION PROVISION DEVICE, ON-BOARD UNIT, IMAGE INFORMATION PROVISION METHOD, AND PROGRAM

Abstract

Object

Provided is an image information provision device capable of collecting an image from an on-board unit of a vehicle traveling at a point or a section without a fixed camera and generating a monitoring image in which an event at this point or section can be confirmed.

Solving Means

An image information provision device includes: a setting unit configured to set a collection point or a collection section for an image on a target road; and an image acquisition unit configured to request an on-board unit of a vehicle present within a predetermined range from the collection point or the collection section to transmit a captured-image captured at the collection point or in the collection section, and store, in a storage, a captured-image received from the on-board unit that has received the request.
