(54) **Title:** SPLIT BINAURAL RENDERING

FIG. 5

(57) **Abstract:** The present disclosure describes techniques for low-complexity split rendering based on a limited number of pre-renditions, thereby significantly reducing the required number of computations on the pre-rendering side, as well as the amount of transmitted metadata. The present disclosure further describes low complexity solutions for post-renderer corrections around one, two or three rotation axes, e.g., for deviations of yaw, pitch and roll.
