

Title of the Invention: CONFERENCE SUPPORT DEVICE, CONFERENCE
SUPPORT SYSTEM, AND CONFERENCE SUPPORT METHOD

ABSTRACT

A conference support device (100) includes a conference information acquisition unit (111), a control information acquisition unit (112), an equipment control unit (113), and a storage unit (120). The storage unit (120) stores correspondence relationship information indicating a correspondence relationship between conference information and control information of environment control equipment that controls the environment of a space in which a conference is held. The conference information acquisition unit (111) acquires information on the conference to be held. The control information acquisition unit (112) acquires the control information from the correspondence relationship information stored in the storage unit (120) according to the conference information. The equipment control unit (113) controls the environmental control equipment based on the control information. The conference support device (100) includes a questionnaire result acquisition unit (115) and a control information adjustment unit (118). The control information adjustment unit (118) updates the correspondence relationship information according to questionnaire results which are acquired by means of the questionnaire result acquisition unit (115) and from which the psychological state of a participant in the conference can be estimated.
