

ABSTRACT

The embodiments of the present application belong to the field of human-computer interaction. Disclosed are a method for controlling a virtual object to release skills, and a terminal, a medium and a program product. The method comprises: displaying a first virtual object and skill release controls; receiving a skill connection operation, which acts on n target skill release controls; and in response to the skill connection operation ending, controlling the first virtual object to release target virtual skills respectively corresponding to the n target skill release controls. By using the solution provided in the embodiments of the present application, the triggering of a plurality of virtual skills can be completed by means of one operation, thereby simplifying a user operation, and reducing the difficulty of continuously releasing the virtual skills.
