CLAIMS

1. An information processing apparatus, comprising:

selecting means for selecting a first mode or a second mode as a saving mode for log information of a job;

receiving means for receiving user identification information of a user; and

saving means for saving, in a case where the first mode is selected by the selecting means as the saving model, at least time information about start time of the job, a file name of a file which is processed by the job, and the user identification information received by the receiving means as the log information, and saving, in a case where the second mode is selected by the selecting means as the saving model, the time information as the log information without saving, as the log information, the file name of the file which is processed by the job and the user identification information received by the receiving means.

2. The information processing apparatus according to claim 1, wherein the user identification information is a name of the user.

3. The information processing apparatus according to claim 1, further comprising

generating means for generating, as the log information in the second mode, the time information, the file name, and the user identification information, and then delete the user identification information and the file name from the log information.

4. The information processing apparatus according to claim 1, further comprising:

holding means for holding, in the second mode, the user identification information and the file name until the user who has logged in the information processing apparatus and who has instructed execution of the job logs out from the information processing

apparatus; and

first deleting means for deleting the user identification information and the file name from the log information after the user logs out from the information processing apparatus.

5. The information processing apparatus according to claim 1, further comprising

second deleting means for deleting the user identification information and the file name from the log information which has been saved before switching of the saving mode from the first mode to the second mode, in a case where the switching occurs.

6. The information processing apparatus according to claim 1, wherein the information processing apparatus is a multifunctional apparatus.

7. The information processing apparatus according to claim 1, wherein the information processing apparatus is a printing apparatus.

8. The information processing apparatus according to claim 1, wherein the job is a print job.

9. The information processing apparatus according to claim 8, wherein the information processing apparatus executes the print job.

10. An information processing method, comprising:

selecting a first mode or a second mode as a saving mode for a log information of a job;

receiving user identification information of a user;

saving, in a case where the first mode is selected as the saving model, at least time

information about start time of the job, a file name of a file which is processed by the job, and the received user identification information as the log information; and

saving, in a case where the second mode is selected as the saving model, the time information as the log information without saving, as the log information, the file name of the file which is processed by the job and the received user identification information.

11. A non-transitory computer-readable storage medium storing a program for causing a processor to execute an information processing method, the information processing method comprising:

selecting a first mode or a second mode as a saving mode for log information for a job;

receiving user identification information of a user;

saving, in a case where the first mode is selected as the saving model, at least time information about start time of the job, a file name of a file which is processed by the job, and the received user identification information as the log information; and

saving, in a case where the first mode is selected as the saving model, the time information as the log information without saving, as the log information, the file name of the file which is processed by the job and the received user identification information.
