

ABSTRACT

A drug-dissolved non-aqueous liquid composition containing a drug, dioleylphosphatidylcholine, tocopherol and an organic solvent, wherein the blend
5 concentration ratio between the dioleylphosphatidylcholine and the tocopherol falls within the range of 75/25 to 25/75, the blend concentration of the dioleylphosphatidylcholine falls within the range of 15 to 85% (w/w), the blend concentration of the tocopherol falls within the range of 15 to 85% (w/w), and the
10 phase of the non-aqueous liquid composition changes into a non-lamellar liquid crystal upon contact with water, a phosphate buffer, a body fluid, a lacrimal fluid or a vitreous fluid.
