

ABSTRACT OF THE DISCLOSURE

SYSTEM AND METHOD FOR WIRELESS CELLULAR ENABLED INFORMATION HANDLING SYSTEM ROUTER

5

An information handling system router integrates wireless local area networking components and wireless cellular wide area network components to route information between a wireless cellular wide area network and plural information
10 handling systems interfaced with a wireless local area network supported by the wireless local area network components. The wireless cellular wide area network components may include a detachable wireless cellular transceiver to support wireless network interfaces when detached from the router, such as wireless cellular for voice
15 communication or a wireless card for single information handling system communication with the wireless cellular network. Alternatively, the wireless cellular wide area network components may integrate a transceiver that is authorized to communicate with the wireless cellular wide area network by a detachable authorization module, such as a SIM module of a wireless cellular.
