MOBILE RADIOTELEPHONE SET WITH HANDSFREE DEVICE

Abstract

A mobile radiotelephone set has a handsfree device (6) with combination means (30) for combining at least two acoustic input signals (9) and an adaptive filter (14) for filtering the combined output signal (23) of the combination means (30). In order to achieve a better voice transmission quality, a high-pass filter (11) is provided for filtering the acoustic input signals (9).
