

SYSTEM AND METHOD OF MONITORING AN LPG SUPPLY

ABSTRACT

5 A system for monitoring an LPG supply at a usage location and a method of
monitoring an LPG supply at a usage location are provided. The system comprises a
sensor unit configured to measure a physical property of the LPG supply at the usage
location; a processing unit coupled to the sensor unit, the processing unit configured to
determine usage data based on the measured physical property, and to transmit the
10 usage data; and a remote server comprising a database configured to receive and store
the usage data; and an application interface to allow one or more user devices to
retrieve the usage data from the database.
