(54) Title: WAX ISOMERATE YIELD ENHANCEMENT BY OXYGENATE PRETREATMENT OF FEED

(57) Abstract: A waxy hydrocarbon feed is catalytically dewaxed with a catalyst that has been selectively activated. The selective activation of the catalyst involves contacting the dewaxing catalyst with a feed mixture containing waxy hydrocarbon and at least one oxygenate. The process results in improved catalyst performance resulting in improved yield of isomerate at equivalent pour.
