(54) Title: CIRCULAR ECONOMY FOR PLASTIC WASTE TO POLYPROPYLENE VIA REFINERY FCC UNIT

Figure 2

Preparation of a Hot Homogeneous Blend of Plastic and Petroleum Feedstock for Direct Conversion of Plastic Waste in Oil Refinery Units

(57) Abstract: Provided is a continuous process for converting waste plastic into recycle for polypropylene polymerization. The process comprises selecting waste plastics containing polyethylene and/or polypropylene and preparing a stable blend of petroleum and the selected plastic. The amount of plastic in the blend comprises no more than 20 wt. % of the blend. The blend is passed to a refinery FCC unit. A liquid petroleum gas C₃ olefin/paraffin mixture is recovered from the FCC unit. The C₃ paraffins and C₃ olefins are separated into different fractions with the C₃ olefin fraction passed to a propylene polymerization reactor, and the C₃ paraffin fraction passed optionally to a dehydrogenation unit to produce additional propylene.
