(54) Title: GAS TURBINE ENGINE FRONT CENTER BODY ARCHITECTURE

(57) Abstract: A gas turbine engine includes a central body support that provides an inner annular wall for a core flow path. The central body support includes first splines. A geared architecture interconnects a spool and a fan rotatable about an axis. A flex support interconnects the geared architecture to the central body support. The flex support includes second splines that intermesh with the first splines for transferring torque there between.
