

ABSTRACT

The present disclosure relates to a video generating method and apparatus, an electronic device, and a readable storage medium. The method: by means of selecting multiple pieces of video footage from a video related to a user, and extracting some target video clips from the multiple pieces of video footage selected, the extracted target video clips are merged with determined target audio materials to generate a target video, thus allowing a user to revisit the past by means of the target video; moreover, the durations of the video clips in the target video match the durations of phrases in the target audio materials.
