

ABSTRACT

A power rail-support unit (1) includes: a base portion (91) that is integrally fixed on a track; a guide rail (11) on which a guide wheel (103) of a side portion of a vehicle (100) travelling on the track abuts; a first fixing portion (17) that is configured to fix the guide
5 rail (11) on the base portion (91); a second fixing portion (18) that is connected to the guide rail so as to be independent of the first fixing portion (17); a bracket (12) that is supported on the guide rail (11); and a power rail (20) that is supported by the bracket (12) so as to be arranged at a predetermined relative position relative to the guide rail (11), and that slides on and makes contact with a collector (104) of the vehicle (100).
