ABSTRACT

System for managing a physical store is provided. The system includes at least one input device **(102)**, a memory unit **(104)**, a processing unit **(106)** and at least one display unit **(108)**. The input device **(102)** is configured to extract information associated with products in the physical store. The memory unit **(104)** comprises an inventory database, wherein the inventory database comprises information associated with products in the physical store. The processing unit **(106)** is configured to receive information from the input device **(102)** or from a remote server and create a product display schedule using information received from the one input device **(102)**. The display unit **(108)** displays information as per the product display schedule.
