

ABSTRACT

ADHESIVE RESIN COMPOSITION, FILM FOR FLUORINE RESIN ADHESION, LAMINATE, AND METHOD FOR PRODUCING LAMINATE

The present invention provides an adhesive resin composition that is used for adhesion of a fluorine-based resin and is aimed at adhesion between fluorine-based resins or between a fluorine-based resin and a material other than a fluorine-based resin. More specifically, the present invention relates to an adhesive resin composition for use in adhesion of a fluorine-based resin, the composition including a polyethylene-based resin (A), an elastomer component (B), and a component (C) having an epoxy group and a vinyl group, wherein a content of the (A) is 55 parts by mass or more and 90 parts by mass or less, a content of the (B) is 10 parts by mass or more and 45 parts by mass or less, the (B) and the (C) have a common repetition unit, and a content of the (C) based on a total amount of 100 parts by mass of the (A) and the (B) is 0.1 parts by mass or more and 1.5 parts by mass or less.
