

Abstract

The present invention relates to a crystal form of a compounds represented by formula (I), and preparation therefor and an application thereof. Specifically, also disclosed in the present invention are a variety of crystal forms of the compound represented by formula (I) (especially crystal form A). The crystal forms have the advantages of excellent stability, hygroscopicity and purity, etc., and has great significance for promoting later-stage drug development of the compound represented by formula (I)

Formula I
