

ABSTRACT OF THE DISCLOSURE

The present invention relates to the field of massager, and provides a massage neck pillow, the massage neck pillow includes a U-shaped neck pillow body, the inside of the U-shaped neck pillow body is provided with a U-shaped installation slot, two sets of massage heads are symmetrically arranged in the U-shaped installation slot, the two sets of massage heads are connected to a control mechanism, each of the two sets of massage heads is controlled by the control mechanism to move and be locked in a respective channel of the U-shaped installation slot. An end of each channel of the U-shaped installation slot is provided with a respective receiving cavity. When each of the two sets of massage heads is driven by the control mechanism to move to the respective end, each of the two sets of massage heads is hidden in the respective receiving cavity. According to the present invention, the two sets of massage heads can be moved in the channels by operating the control mechanism. When the two sets of massage heads are moved to the ends of the channels, each of the two sets of massage heads is hidden in the respective receiving cavity, so that the massage neck pillow can be used as a neck pillow sleeved on the human neck. When each of the two sets of massage heads moves toward an inner side of the respective channel to a position, the massage neck pillow enters into a massage mode in which the neck can be massaged by the massage neck pillow, thus the massage neck pillow can have multiple functions and can be easily operated.
