(54) Title: A WINDOWING AND CONTROLLING SYSTEM THEREOF COMPRISING A COMPUTER DEVICE

(57) Abstract: A method and a program system comprising a plurality of windows displayed as an evolving (7) series of instances (12, 13, 14, 15) of said windows (8, 9, 10, 11) with different sizes is described. The content of said evolving series of instances of window sizes may be changed according to specific rules and a change is performed when a size is equal with at least one predefined reference size for a window (2, 4, 6). A preferred embodiment of the present invention provides a possibility to display and manage a plurality of windows comprising standard input and output windows as well as system indicators on a small computer screen such as used in mobile telephones or Personal Digital Assistants.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
