

ABSTRACT

Provided are an image conversion method and apparatus, a device, and a storage medium. A first domain corresponding to a first image is determined using an image conversion network. A feature mapping relationship between the first image and a preset image in each layer of the image conversion network is determined based on the first domain and a second domain corresponding to the preset image. A picture of the first image is converted from the first domain to the second domain based on the feature mapping relationship to obtain a second image.
