

Abstract

The present invention provides a humidifying filter, with which it is possible to sufficiently remove, through washing with water, impurities which are stuck on the humidifying filter. A humidifying filter (31) of the present invention includes: two sheet members (11, 12) which are removably combined together; and a retention frame (30) which supports the two sheet members (11, 12) while the two sheet members (11, 12) are combined together.
