

[Title of Invention]

Disposable diaper

[ABSTRACT]

A disposable diaper (10) has a crotch stretching unit (200) which is formed at a position which overlaps with an absorber (40) in a crotch region (25). The crotch stretching unit (200) is formed so as to run across a virtual product centerline VL_T , and overlaps with two fold lines (FL). A virtual crotch centerline (VL_C) is provided at a front side than the virtual product centerline (VL_T), and the two fold lines (FL) each are provided at a rear side than the virtual product centerline (VL_T).
