Download and install a one-touch application on a mobile device of a customer, including contacting the support center to register the customer (e.g., username, password). 401
Register a product by transmit a machine-readable code of the product to the support center via the one-touch application from the mobile device without requiring the customer to specifically provide detailed product information. 402
Displaying a list of registered product on a display of the mobile device, each being associated with one or more communication channels available to reach an agent of the support center. 403
Optionally provide a link to a publication forum to enable the customer to find a possible solution to its problem without having to contact the agent. 404
In response to a selection of one of the available communication channels associated with the product, establish a communication session with an agent for support services. 405

FIG. 8 (CONT.)

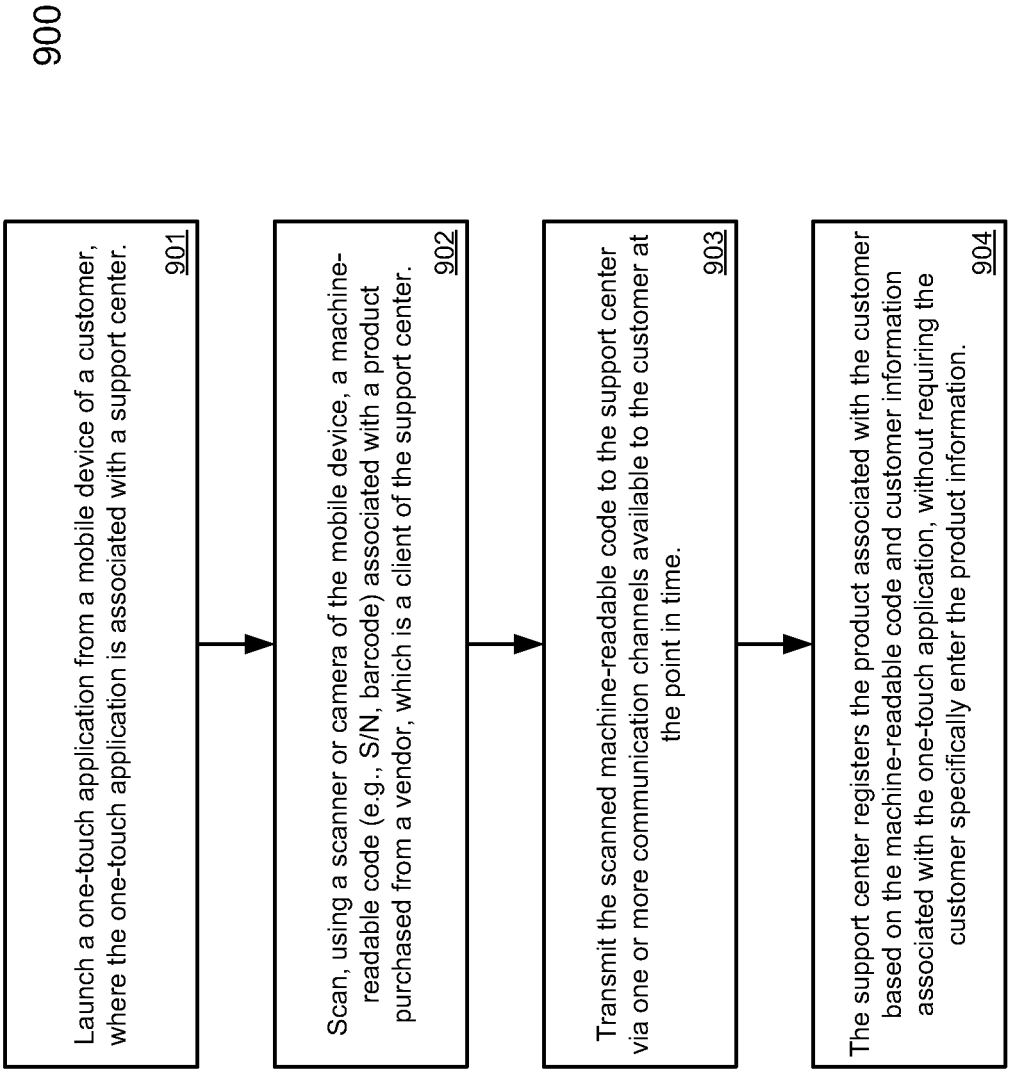

900
Launch a one-touch application from a mobile device of a customer, where the one-touch application is associated with a support center. 901
Scan, using a scanner or camera of the mobile device, a machine-readable code (e.g., S/N, barcode) associated with a product purchased from a vendor, which is a client of the support center. 902
Transmit the scanned machine-readable code to the support center via one or more communication channels available to the customer at the point in time. 903
The support center registers the product associated with the customer based on the machine-readable code and customer information associated with the one-touch application, without requiring the customer specifically enter the product information. 904

FIG. 9

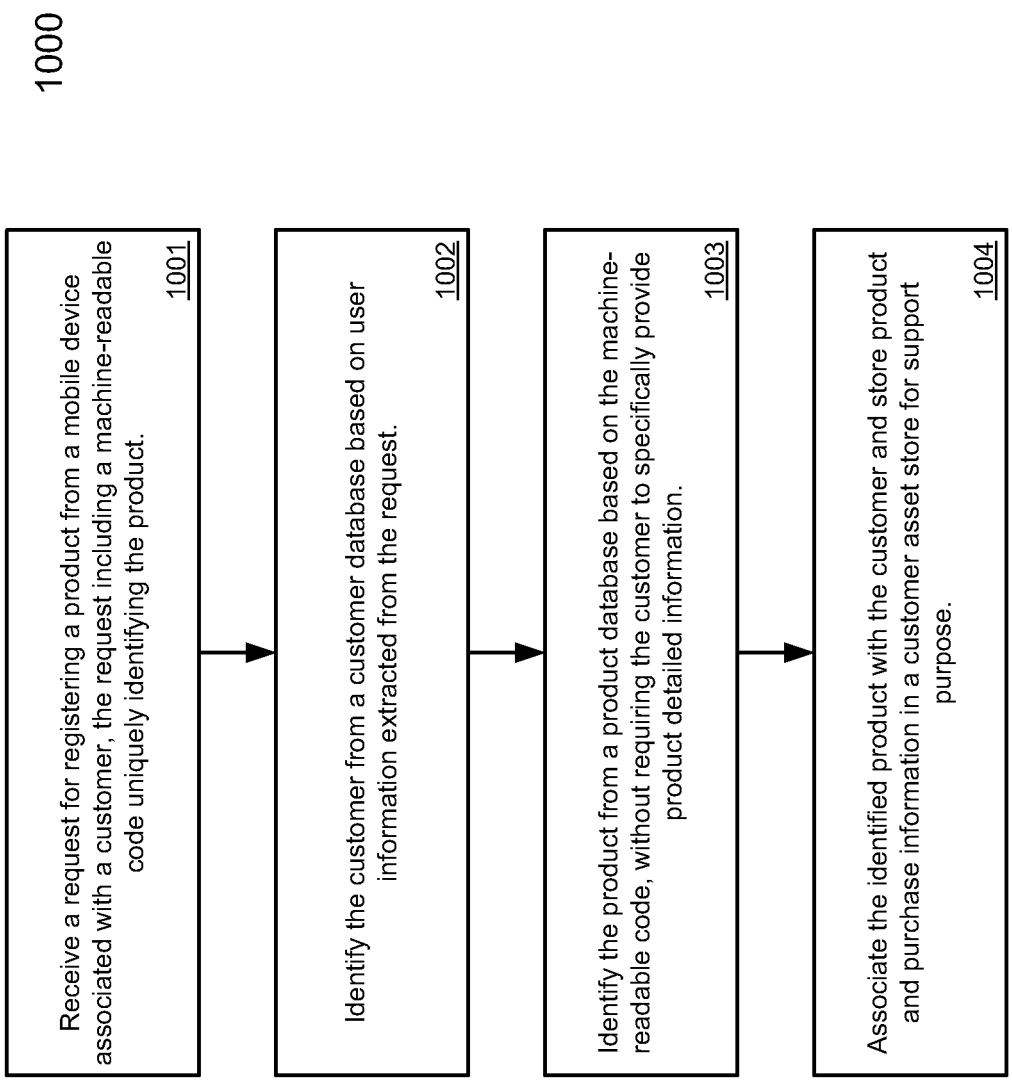

1000
Receive a request for registering a product from a mobile device associated with a customer, the request including a machine-readable code uniquely identifying the product.
1001
Identify the customer from a customer database based on user information extracted from the request.
1002
Identify the product from a product database based on the machine-readable code, without requiring the customer to specifically provide product detailed information.
1003
Associate the identified product with the customer and store product and purchase information in a customer asset store for support purpose.

FIG. 12 (CONT.)

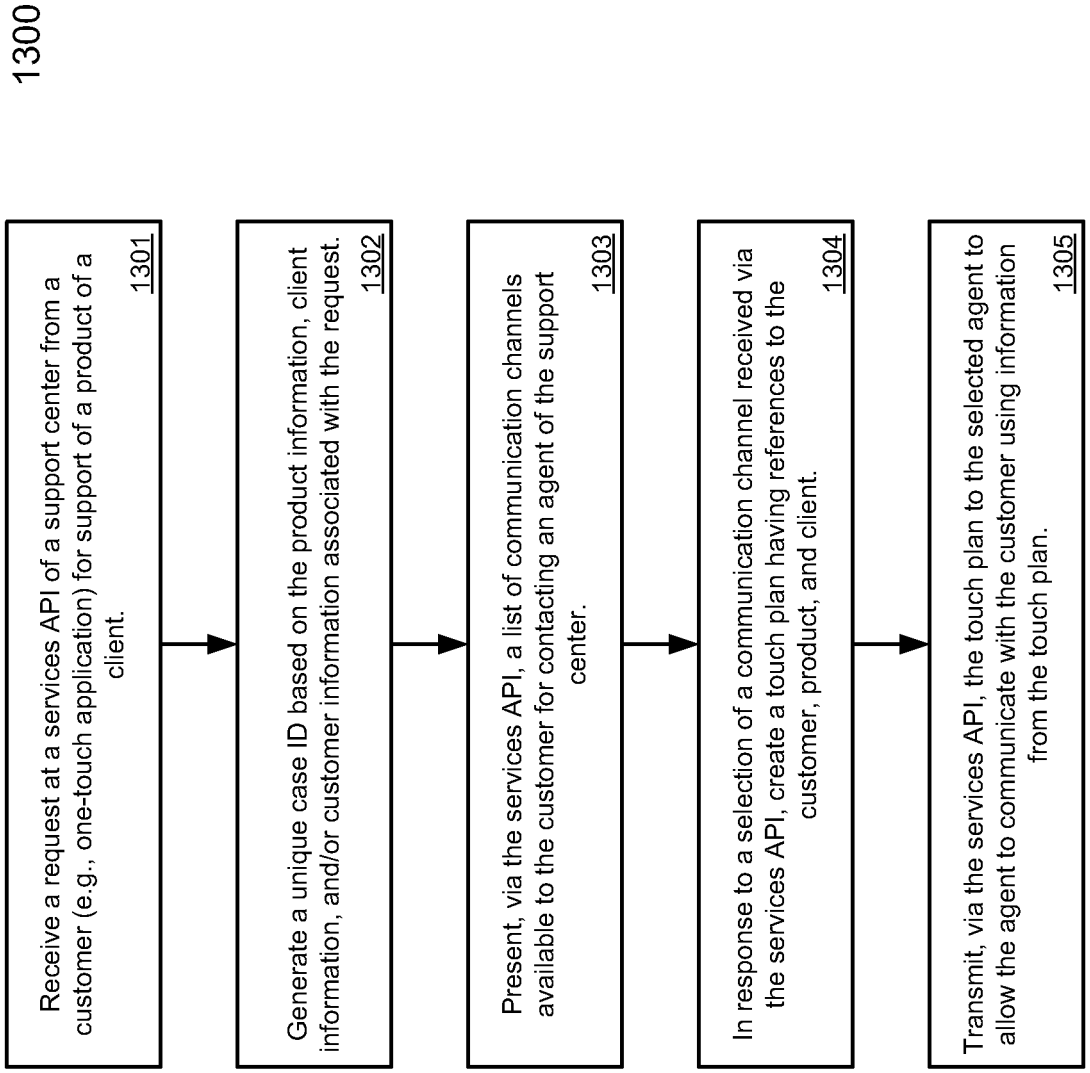

1300
Receive a request at a services API of a support center from a customer (e.g., one-touch application) for support of a product of a client. 1301
Generate a unique case ID based on the product information, client information, and/or customer information associated with the request. 1302
Present, via the services API, a list of communication channels available to the customer for contacting an agent of the support center. 1303
In response to a selection of a communication channel received via the services API, create a touch plan having references to the customer, product, and client. 1304
Transmit, via the services API, the touch plan to the selected agent to allow the agent to communicate with the customer using information from the touch plan. 1305

FIG. 13

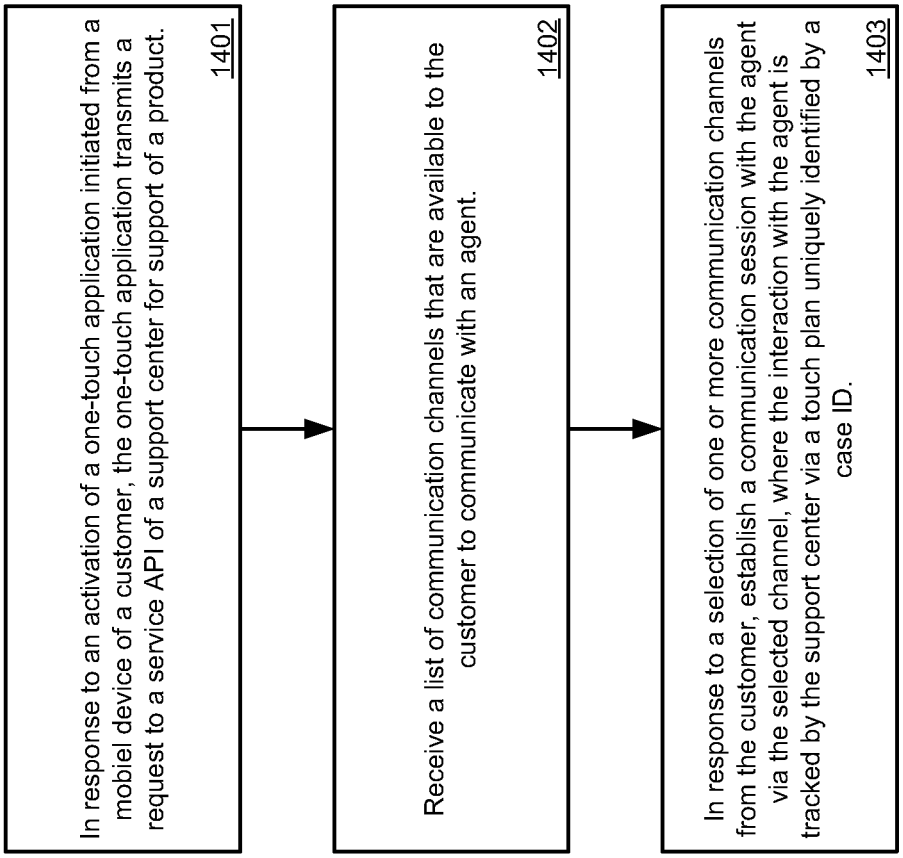

1400
In response to an activation of a one-touch application initiated from a mobiel device of a customer, the one-touch application transmits a request to a service API of a support center for support of a product.
1401
Receive a list of communication channels that are available to the customer to communicate with an agent.
1402
In response to a selection of one or more communication channels from the customer, establish a communication session with the agent via the selected channel, where the interaction with the agent is tracked by the support center via a touch plan uniquely identified by a case ID.

FIG. 15

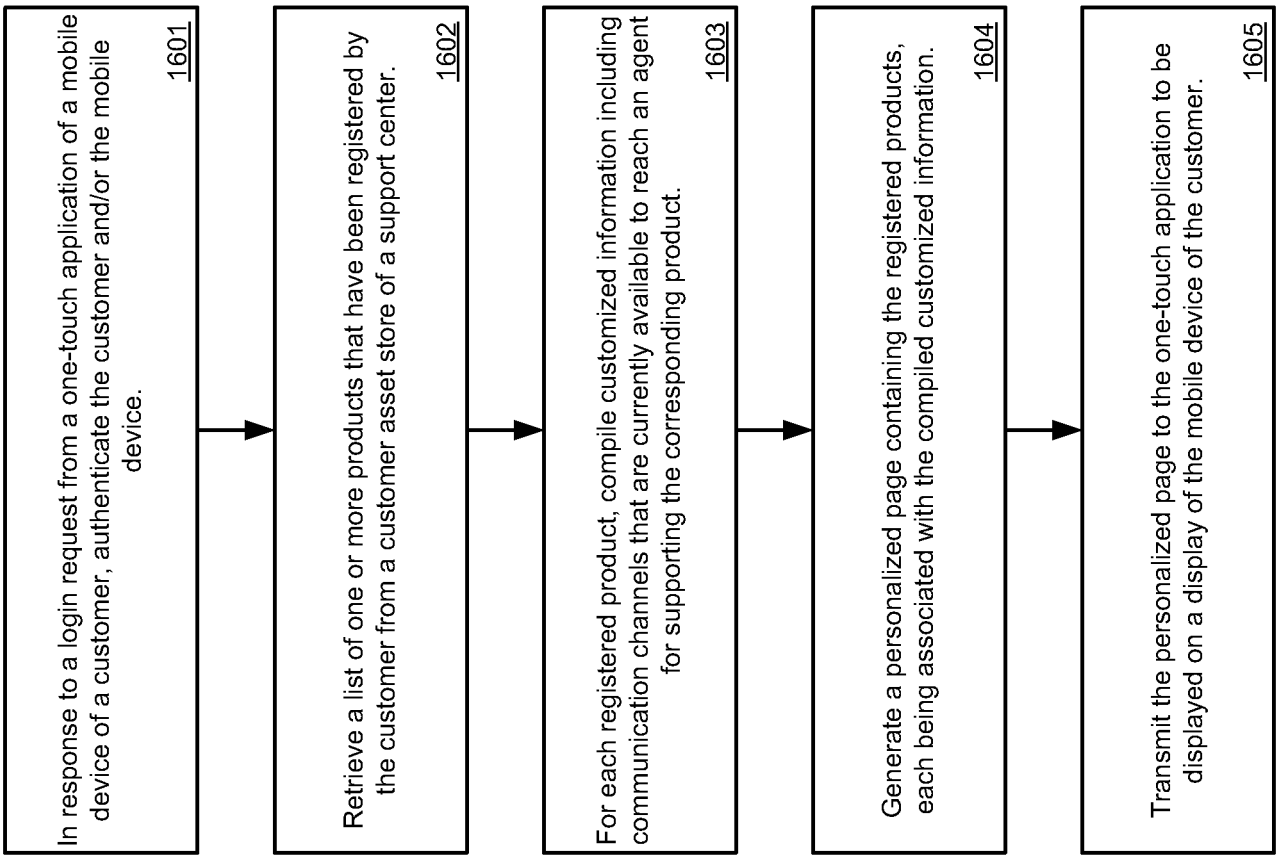

1600
In response to a login request from a one-touch application of a mobile device of a customer, authenticate the customer and/or the mobile device.
1601
Retrieve a list of one or more products that have been registered by the customer from a customer asset store of a support center.
1602
For each registered product, compile customized information including communication channels that are currently available to reach an agent for supporting the corresponding product.
1603
Generate a personalized page containing the registered products, each being associated with the compiled customized information.
1604
Transmit the personalized page to the one-touch application to be displayed on a display of the mobile device of the customer.
1605

FIG. 16

Channels / Entities	Voice	Email	Chat	...	Web
Client Preference	No	Yes	No	...	Yes
Customer Preference	Yes	Yes	Yes	...	Yes

FIG. 17

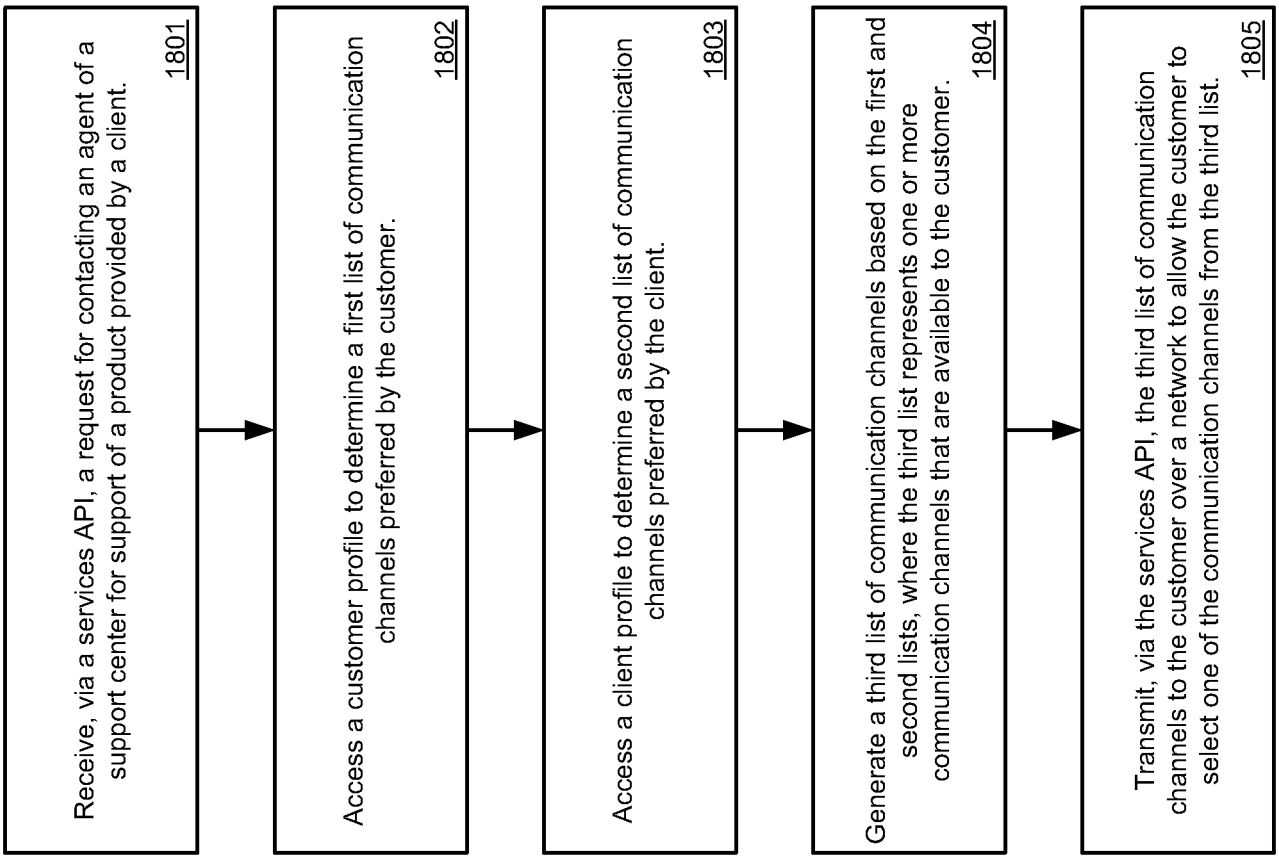

1800
Receive, via a services API, a request for contacting an agent of a support center for support of a product provided by a client.
1801
Access a customer profile to determine a first list of communication channels preferred by the customer.
1802
Access a client profile to determine a second list of communication channels preferred by the client.
1803
Generate a third list of communication channels based on the first and second lists, where the third list represents one or more communication channels that are available to the customer.
1804
Transmit, via the services API, the third list of communication channels to the customer over a network to allow the customer to select one of the communication channels from the third list.
1805

FIG. 19

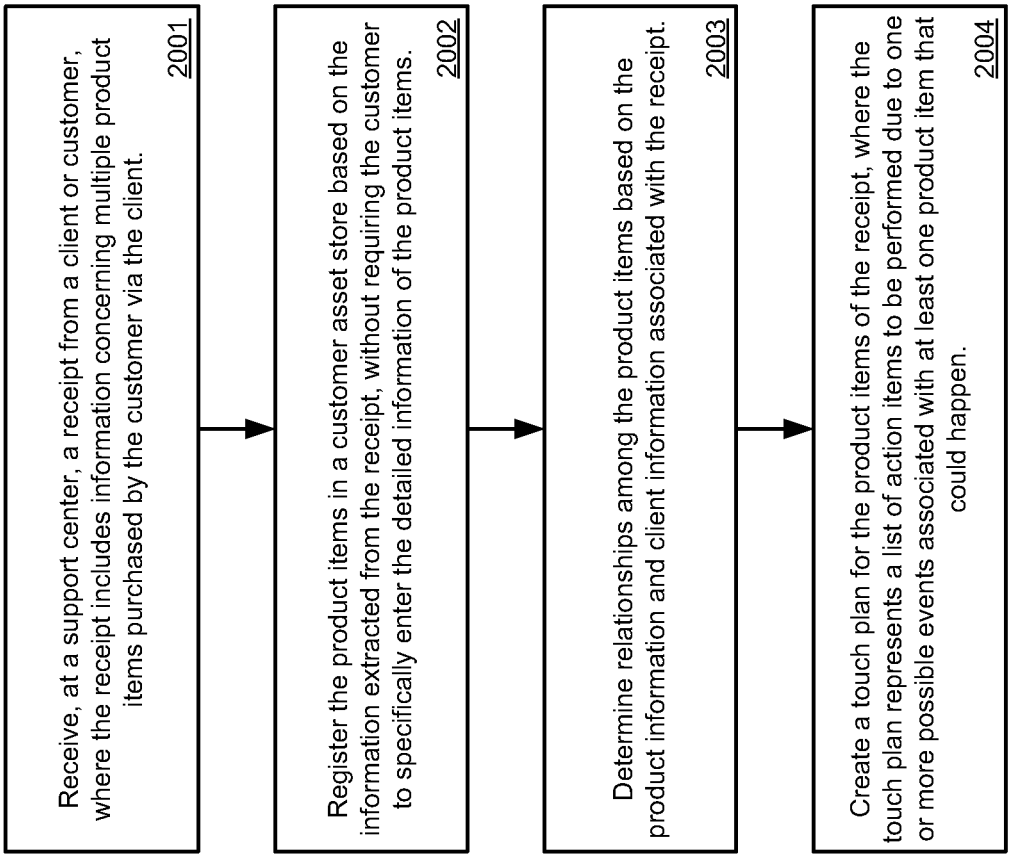

2000
Receive, at a support center, a receipt from a client or customer, where the receipt includes information concerning multiple product items purchased by the customer via the client.
2001
Register the product items in a customer asset store based on the information extracted from the receipt, without requiring the customer to specifically enter the detailed information of the product items.
2002
Determine relationships among the product items based on the product information and client information associated with the receipt.
2003
Create a touch plan for the product items of the receipt, where the touch plan represents a list of action items to be performed due to one or more possible events associated with at least one product item that could happen.
2004

FIG. 20

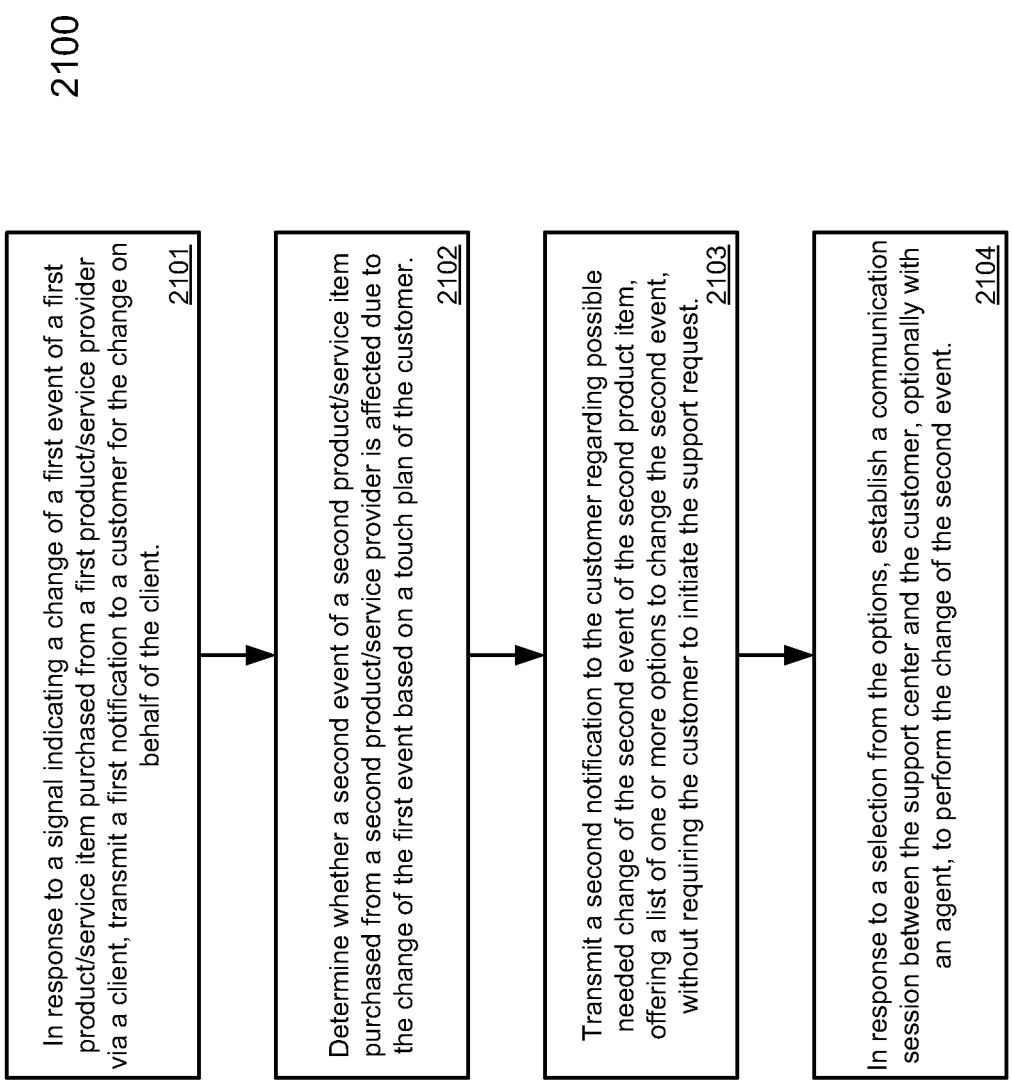

2100
In response to a signal indicating a change of a first event of a first product/service item purchased from a first product/service provider via a client, transmit a first notification to a customer for the change on behalf of the client. 2101
Determine whether a second event of a second product/service item purchased from a second product/service provider is affected due to the change of the first event based on a touch plan of the customer. 2102
Transmit a second notification to the customer regarding possible needed change of the second event of the second product item, offering a list of one or more options to change the second event, without requiring the customer to initiate the support request. 2103
In response to a selection from the options, establish a communication session between the support center and the customer, optionally with an agent, to perform the change of the second event. 2104

FIG. 23

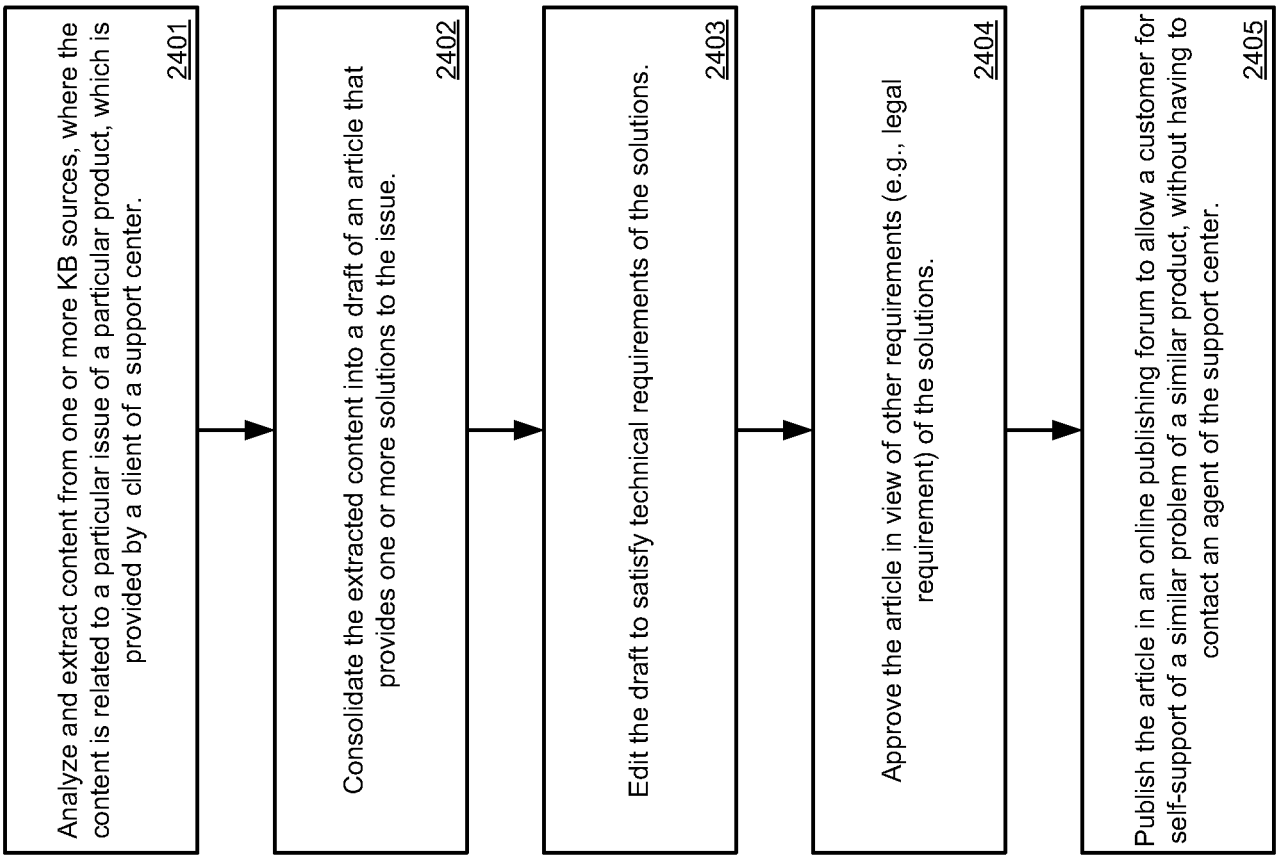

2400
Analyze and extract content from one or more KB sources, where the content is related to a particular issue of a particular product, which is provided by a client of a support center.
2401
Consolidate the extracted content into a draft of an article that provides one or more solutions to the issue.
2402
Edit the draft to satisfy technical requirements of the solutions.
2403
Approve the article in view of other requirements (e.g., legal requirement) of the solutions.
2404
Publish the article in an online publishing forum to allow a customer for self-support of a similar problem of a similar product, without having to contact an agent of the support center.
2405

FIG. 24

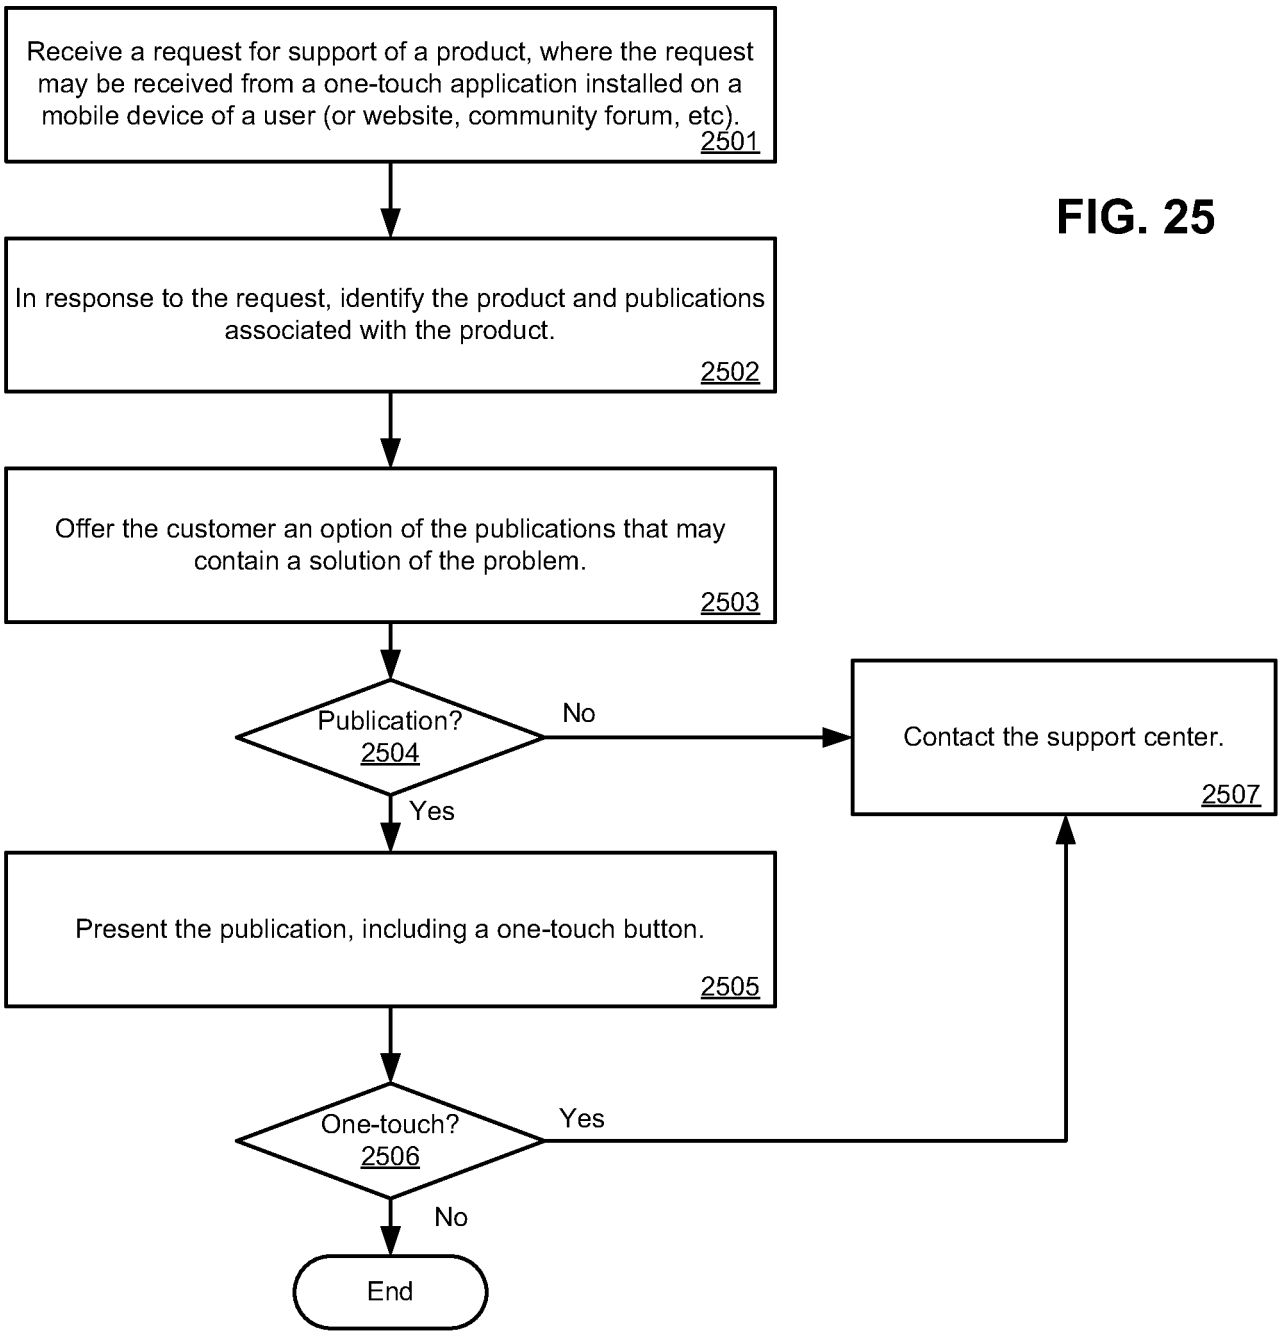

Receive a request for support of a product, where the request may be received from a one-touch application installed on a mobile device of a user (or website, community forum, etc).
2501
In response to the request, identify the product and publications associated with the product.
2502
Offer the customer an option of the publications that may contain a solution of the problem.

2900
Define cross-vendor policies (e.g. tags and product categories) to share certain knowledgebase information concerning products using components from multiple vendors.
2901
Receive a request for supporting a product having components provided by a first and second vendors, respectively.
2901
Identify documents in the knowledgebase that are associated with the product and the first and second vendors.
2903
Enable at least a portion of the documents to be accessible by a single agent based on the corresponding tags defined by the first and second vendors.
2904
Allow the agent to access the documents across the first and second vendors to provide support to the customer.
