

METHOD FOR MANAGING FILE REPLICATION IN APPLICATIONS

ABSTRACT

A method for managing a first and second version of an electronic file is disclosed. In the method, first and second versions of an electronic file are recognized and a synchronization event is initiated. An application program interface accesses the first and second versions, compares information associated with each, generates a result and reports the result to the first software application. A second software application generates a user interface in accordance with a feature of the second software application, where the electronic file is associated with the second software application, and the user interface is displayed on a display device.
