

ABSTRACT

Embodiments of the present invention provide a sidelink (SL) control method and apparatus, a communication device, and a storage medium. The method for controlling an SL comprises: responding, by means of a first UE, to a first timer configured to be started after SL sending, and monitoring an SL channel in a timing duration of starting of the first timer. Therefore, according to the embodiments of the present invention, after the first UE sends an SL, the waking time of the first UE can be prolonged, such that the first UE can monitor the SL channel in the timing duration of the first timer, the probability of losing data and/or signaling sent by an opposite-end UE in the SL can be reduced, and the communication quality of SL communication is improved.
