

Abstract

Provided are a production device and a production method for producing layered food having an outer shape and an inner hole shape formed into a shape different from a circular shape. A production
5 device for layered food (1) includes: a dough supply section (3) for causing liquid dough to adhere to an outer circumference of a spit (12); a dough baking section (4) for baking the liquid dough to form baked dough (11) around the spit (12); conveyance means (5) for conveying the spit (12) between the dough supply section (3)
10 and the dough baking section (4); a forming tool (70) including a forming surface (70A) conforming to a shape of at least a part of an outer shape of the spit (12); and drive means (71) for pressing the forming tool (70) against the baked dough (11) in the shape of the layer that is formed around the spit (12).
