(54) Title: TECHNIQUES TO PROVIDE MEASUREMENT PILOT TRANSMISSION INFORMATION IN WIRELESS NETWORKS

(57) Abstract: Various embodiments are disclosed relating to techniques to provide neighbor information in wireless networks and/or techniques to provide measurement pilot transmission information in wireless networks. According to an example embodiment, a neighbor report (900) may be received from a first wireless node (104, 114), the neighbor report including at least measurement pilot transmission information (908) for one or more other wireless nodes (1610). According to an example embodiment, a signal measurement technique for measuring signals from at least one of the one or more other wireless nodes may be determined based, at least in part, upon the neighbor report (1612). According to another example embodiment, a message may be received from a first wireless node, the message including measurement pilot transmission information for the first wireless node (1410). A signal measurement technique for measuring signals from the first wireless node may be determined based, at least in part, upon the received message (1420).
