(54) Title: SYSTEMS AND METHODS OF VERIFYING INFORMATION COMPLETENESS

FIG. 1

(57) **Abstract:** Systems and methods for verification of information completeness are disclosed. They include a processor; a network; a network communication device; and a data store positioned in communication with the processor. The data store contains instructions that announce an association between a subject and an aggregator; record the association between the subject and the aggregator; submit a permission to allow a reporter to submit information regarding the subject to the aggregator; notify to the reporter of the permission; verify the permission granted to the reporter; submit the metadata to a datum of information to the aggregator by the reporter; submit the same datum of information to the subject by the reporter; provide a first aggregated report of all metadata tied to the datums from the aggregator; and provide a second aggregated report containing all the metadata and the datums associated with the first aggregated report.
