

ABSTRACT

Embodiments of the present invention disclose a method for accessing a local network, and a related device, so that a user can simultaneously access an operator network and a local network. The method in the embodiments of the present invention includes: receiving, by an MME, an access
5 request of user equipment UE that is sent by an base station eNB, where the access request carries access information of the UE; determining, according to the access information of the UE, a first local gateway corresponding to the UE; and establishing, for the UE, a user plane bearer that is from the eNB to a gateway C-GW of a core network and that includes the first local gateway used as an intermediate node.
