

Abstract

Steam pot for conveyor belt is a revolution invention that allows hundred different types of cuisines to be served on a conveyor belt at the same time. Customers will be spoilt with choices as now they are able to enjoy cold as well as hot food on the same conveyor belt! Best of all, the food served will be kept warm for a duration between 45 minutes to 60 minutes. Business owners will be excited to know that this invention can be incorporated into their existing conveyor belt system by doing an updating on their existing system. All technologies, equipment and materials used are widely available therefore making the manufacturing of the Steam Pot a very affordable piece for the business owners.
