Abstract of the Disclosure

The invention proposes a counter value payment managing method and a server therefore, which relieves a payer from shouldering the payment of counter values. Further, the invention proposes a value payment managing program, a computer-readable recording medium, a value payment managing medium, and a value payment recording medium. The method manages the payment of a counter value from a payer to a payee by granting a credit limit corresponding to the counter value, and is executed by a server which receives a payee's counter value, sets a credit limit on the basis of the counter value, receives payee's credit transaction values, calculates a sum of guarantee money to be paid by the payer on the basis of the credit transaction values, and updates the credit limit by deducting the calculated guarantee money from the credit limit. The payer may grant a credit limit corresponding to a counter value to a payee, so that payer can pay a necessary sum of money to the payee within the counter value whenever the payee wishes. Therefore, the payer is not required to prepare an entire amount of money on a day when the counter value is paid, which relieves the payer from the burden of paying the counter value.
