TITLE

Spunlaced Acrylic/Polyester Fabrics

ABSTRACT OF THE DISCLOSURE

5 A process is disclosed for making spunlaced
acrylic/polyester fabrics comprising applying low impact
water jet energy to a fabric web and vacuum dewatering the
resulting spunlaced fabric. The spunlaced fabrics exhibit
very low wet and dry particle counts and high absorbency
thereby making them particularly useful in cleanroom wiper
10 applications and as coverstock for sanitary napkins, diapers
and the like.
