

ABSTRACT

A stator core 20 has a band-like first core 24 and a plurality of second cores 26. The first core 24 has a plurality of first yoke forming parts 24a and a plurality of connection parts 24b that connect the first yoke forming parts 24a adjacent to each other in the circumferential direction to each other. The second core 26 has a second yoke forming part 26a sandwiched between a pair of adjacent first yoke forming parts 24a and a tooth forming part 26b that projects inward in the radial direction from the first yoke forming parts 24a. The first yoke forming part 24a and the second yoke forming part 26a are connected to each other at a first connection surface 40 and a second connection surface 60.
