

METHOD FOR CONFIGURING EVOLVED PACKET SYSTEM NON-ACCESS STRATUM SECURITY ALGORITHM AND RELATED APPARATUS

ABSTRACT

5 This application discloses a method for configuring an EPS NAS security algorithm, and a
related apparatus in the field of communication technologies. In the technical solution provided in
this application, an access and mobility management function entity needs to determine whether a
selected EPS NAS security algorithm has been successfully provided to a terminal device, and
after determining that the selected EPS NAS security algorithm has not been successfully provided
10 to the terminal device, the access and mobility management function entity provides the selected
EPS NAS security algorithm to the terminal device again. According to the technical solution
provided in this application, it is ensured that the access and mobility management function entity
can successfully configure the EPS NAS security algorithm for the terminal device.
