

ABSTRACT

This disclosure discloses a method and apparatus for controlling display of a virtual object, a device, a medium, and a program product. The method includes: displaying the virtual object in a virtual environment, where the virtual object has a disguise skill (301); receiving a skill release operation to release the disguise skill (302); and changing a first coloration of the virtual object to a second coloration in response to the skill release operation, the second coloration being determined based on a coloration in the virtual environment at a location of the virtual object (303). According to the method, the virtual object can be hidden in various virtual environments.
