CLAIMS

[Claim 1]

A lubricant composition comprising a lubricant base oil and a sulfur-based extreme pressure agent, the sulfur-based extreme pressure agent is a sulfurized olefin having an amount of active sulfur of 8% to 11% by weight; the content of the extreme pressure agent in the composition is from 5% to 15% by weight based on the total weight of the lubricant composition; the lubricant composition has a kinetic viscosity at 100°C of 8 to 15 mm^2/s; and the lubricant base oil comprises a mineral oil-based base oil, a Fischer-Tropsch-derived base oil, and a poly-α-olefin base oil.

[Claim 2]

The lubricant composition according to claim 1, wherein the lubricant base oil has a kinetic viscosity at 100°C of 5 to 15 mm^2/s.

[Claim 3]

The lubricant composition according to claim 1 or 2, which is used for transmissions.

[Claim 4]

The lubricant composition according to claim 1 or 2, which is used for differential gears.
